

day 1

① Configuring Movie web app for use of database.

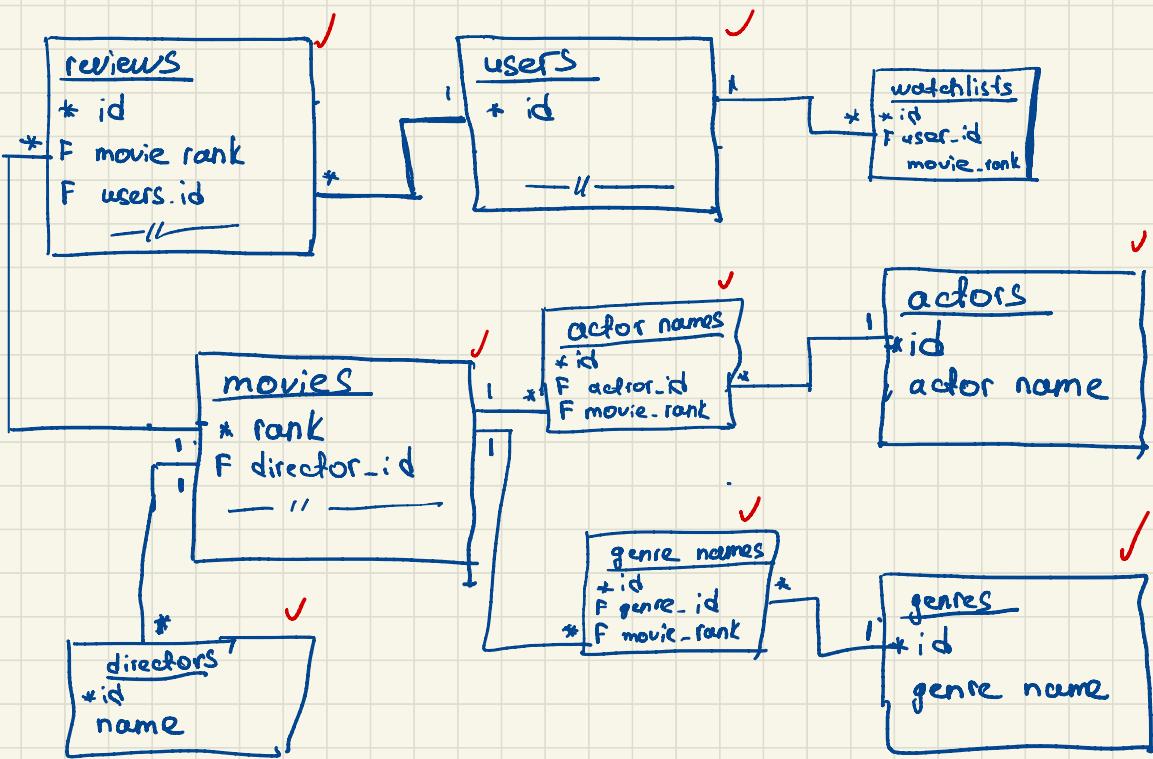

- config.py ✓

- .env ✓

- __init__.py ✓

② object relational mapper

- orm.py

③ populating repository

- users.

- movies

- reviews

④ SQL Alchemy Repository.

- creating functions needed in abstract repository.

~~actors[actor-name] = actor_id.~~

return 'id', 'actor_id', movie_rank'

↓
manually ↓ ↓
key

id_name_pair[0]

Spend like 10 hours, trying figuring out how to connect watchlist table.

⑤ making tests.

- database

- ORM
